

SCENEMASTER

HO SCALE
SUNFLOWERS
949-1119

Thanks for purchasing this Walther's SceneMaster kit, which can be used by itself, or to add additional plants to the Vegetable Garden (#949-1110) or Overgrown Garden (#949-1117; both sold separately). Please read these instructions and study the drawings before starting. PLEASE NOTE: Parts in this kit are made from a "soft" plastic and must be assembled with a CA type adhesive (sold separately). The various parts can be arranged as desired; the instruction shows a typical example. Individual parts are not numbered; please refer to the sprue layout to identify parts. For additional Walther's SceneMaster accessories, figures and other details, see your local dealer, check out the current Walther's Model Railroad Reference Book or visit us online at walthers.com.

1) Paint the center of each Stalk and the Baseplates brown as shown; bend leaves into realistic positions with tweezers.

2) Carefully trim Stalks from sprues using a sprue cutter. Insert center into Flower and secure with a tiny drop of CA.

3) If desired, some stalks can be cut shorter as shown for a more realistic appearance. Insert completed sunflowers into openings in Base and secure from the underside with a drop of CA.
