

HO Scale Structure Kit STORAGE TRAILER # 949-2901

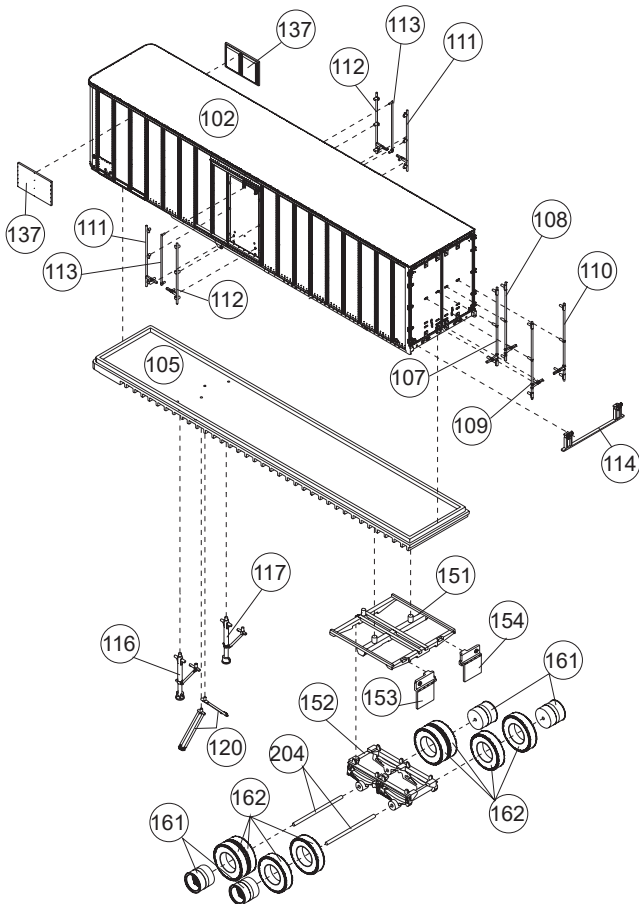

Thank you for purchasing this kit. Some parts will not be used, so read all the instructions thoroughly. The Trailer uses parts that are a press fit design, so gluing is optional. The Staircase is very precise and delicate, and must be glued together. We recommend using a gel type plastic cement with fine applicator tip to make construction easier.

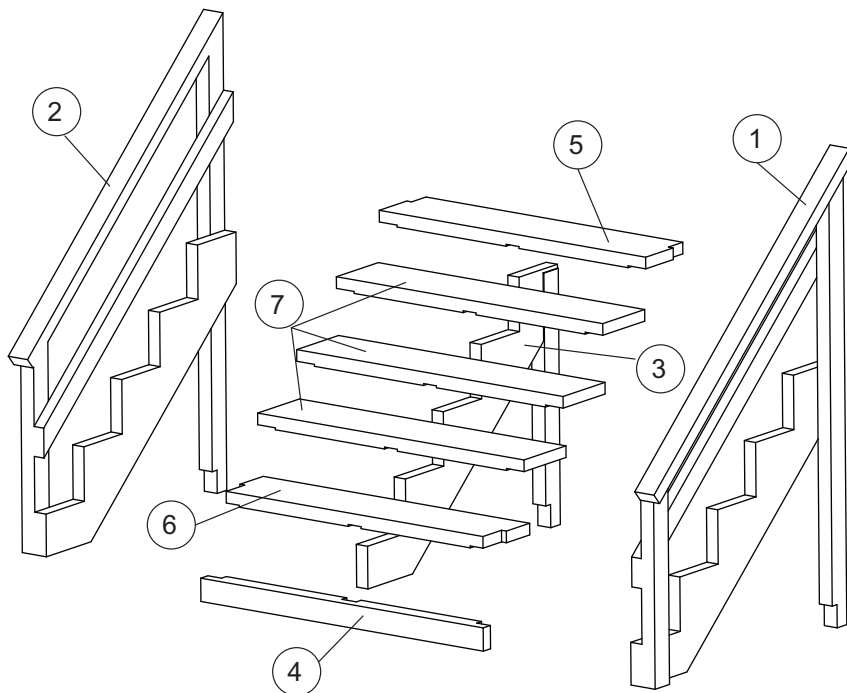

TRAILER ASSEMBLY

1. Press fit parts 107, 108, 109, 110 & 114 to the end of the trailer as shown. Then press in parts 111, 112 & 113 to both side doors.

2. Insert axles (204) into Frame (152). Press Tires (162) over Wheel Rims (161), then press the Rims onto each axle end. Glue Mud Flaps (153 & 154) to Bogie Top Frame (151). Glue the Top Frame to the Lower Bogie, and press this assembly to the Trailer Floor (105).

3) Add parts 116, 117, and 120 as shown. The completed floor can now be snapped into the trailer body. Glue Placard (137) onto the trailer side as shown, or were desired.

Staircase:

1) Glue Bottom Tread (6) and Top Tread (5) to Handrail sections 1 & 2 as shown. Let this dry for 5 minutes.

2) Add the Middle Stringer (3) to the top and bottom Treads. Glue Cross Brace (4) to parts 1, 2 and 3. Make required adjustments now (while the glue is soft) for a straight and square assembly. Let this dry thoroughly.

3) Install Step Treads (5, 6, 7) to the assembly from Step 2. Place the finished piece near the side door of the trailer or where desired.

Decals:

1) Trim the desired art from the decal sheet and dip in water for 10 seconds. Remove the decal from the water and let stand for 1 minute. Slide the decal onto the surface of the model and into position. Carefully blot off any excess water.

2) Lightly brush Micro Sol® on top of the decal. This softens and helps the decal conform to irregular surfaces. Do not touch the decal while it is wet!

3) When dry - check for any trapped air bubbles. Prick them with a pin, or sharp knife tip and apply more Micro Sol.
