

Thanks for purchasing this SceneMaster® kit. Please read and study these instructions before starting. All parts are real wood; some warping may occur as your model acclimates to your layout room. Use compatible glue for wood to attach parts to each other.

PLEASE NOTE: Most of the cutting is already done, however each part is still attached to the frame. Use a new knife blade and carefully cut - do not twist or break parts loose - each attachment point.

1) With wood-grain detail on Deck (#1) facing down as shown, glue Supports (2x 2) to left and right and allow to dry. Carefully cut deck assembly away from frame.

2) Align Dock Legs (6x 3) with inset areas on Supports and glue where parts meet. When dry install on your layout.
