

SCENEMASTER

HO SCALE
CATTAILS (60-Pk)
949-4179

Thanks for purchasing this Walther's SceneMaster kit. Designed for easy assembly and installation the finished models look great at the edge of a stream, pond or lake. You'll also find them growing in low spots alongside railroad and highway rights-of-way as well. Please read these instructions and study the drawings before starting. The various parts can be arranged as desired; the instruction shows a typical example. Individual parts are not numbered; please refer to the sprue layout to identify parts. For additional Walther's SceneMaster accessories, figures and other details, see your local dealer, check out the current Walther's Model Railroad Reference Book or visit us online at walthers.com.

1) Paint the Base and the tip of each cattail brown as shown; bend leaves into realistic positions with tweezers.

2) Carefully trim plants from sprues using a sharp hobby knife.

3) Apply all-purpose cement (sold separately) to the base as shown, and glue in place in new or existing scenery.
